PROJECTS

Rent-a-Car

Web application with microservice-based architecture. The front-end part of app is built with Angular web framework and the back-end is done using Java and MySQL database.

ApartmentAir

Web application for apartment booking. It permanently stores data in text files in JSON format. *Front-end*: HTML + CSS, JavaScript, jQuery + AJAX; *Back-end*: JAX-RS REST Java

LambdaPharmacy

Web application that represents a centralized pharmacy information system. Implemented in Java + MySQL + Angular.

Boardspan

Web application that provides data analytics, board governance and recruiting services to any board that wants to be more effective and successful.
Technologies used: Ruby/Rails, JavaScript, jQuery + AJAX, PostgreSQL

Puller

Web application used as pull request manager. It allows user to sign in using his personal GitHub account and provides an overview of all GitHub essentials.
Technologies used: Ruby/Rails, JavaScript, jQuery + AJAX, PostgreSQL
